herbicide

SUPERIOR WEED CONTROL WITH LESS VOLUME PER ACRE

Superior Weed Control

Superior control against tough broadleaf weeds and grasses with a lower use rate and longer residual than other corn herbicides.

Longer Lasting

Longer control in the season on grasses and tough broadleaf weeds than other corn herbicides.

Application Flexibility

Maximum flexibility with the option to apply preemergence or postemergence.

Multiple Modes of Action

Three modes of action leads to greater weed control with resistant and difficult to control weeds.

Labeled Crops:

Field Corn, Popcorn, Sweet Corn

Application Timing:

Preplant burndown/preemergence, preplant incorporated and early postemergence

Target Weeds:

Annual grasses, lambsquarters, pigweed, waterhemp, Palmer amaranth and black nightshade, ragweed and velvetleaf

Active Ingredients:

Pyroxasulfone, Fluthiacet-Methyl, Atrazine

Modes of Action:

Three modes of action: Seedling Shoot Growth Inhibitor (Group 15) + PPO Inhibitor (Group 14) + Photosynthetic Inhibitor (Group 5)

Organic Matter	Coarse	Medium	Fine
	PRE Use Rate - Pints/Acre		
Less than 1%	1.3	1.5 - 1.75	1.6 - 2
1 to 3%	1.5 - 2	1.75 - 2	2.5
3% or more	2	2 - 2.5	2.5 - 3
	Coarse	Medium	Fine
	Post Use Rate - Pints/Acre		
	1.0 - 2.0	1.33 - 2.0	2.0 - 3.0
