

REGULATOR™

ELITE FOAM CONTROL

REGULATOR™ is an elite, fast, and effective way to remove the inconvenience that comes from in-tank foaming.

REGULATOR is formulated to aggressively suppress foam that builds during filling and agitation.

PRODUCT ADVANTAGES

- Low use rate
- Prevents foam from forming or knocks down existing foam
- No negative effect on tank mix active ingredients
- Reduces mixing and cleaning time in spray application systems
- Eliminates spillage of chemical in foam
- Reduces waste, contamination, and pesticide exposure contained in foam running out of tanks
- NPE-free formulation

RATE

FOAM PREVENTION EFFICIENCY

FOAM BREAKING POWER

The silica formulation in **REGULATOR** rapidly spreads across forming foam bubbles and pierces the lamella. This disengages the entrapped air and eliminates the foam before it becomes a limiting factor.

UNTREATED

REGULATOR
ELITE FOAM CONTROL

LEFT: Prior to the addition of Regulator, the tank mix including Liberty Herbicide created stable foam that was on the verge of flowing out of the tank.

RIGHT: After the addition of Regulator, foam bubbles break at the surface and do not continue to build.

When foam is already formed, **REGULATOR** is designed to knock down foam quickly and prevent stable foam from forming.

Spray in a zig-zag pattern over the top of the foam until the foam dissipates. The squeeze bottle packaging on the pint and quart bottles helps ensure even spreading over the foam layer.
